

## Case Study 1.0 | Projoman

<http://www.projoman.com>

## The situation

Projoman is a web application for the mentors and students to collaborate and develop projects out of innovative ideas. Projoman helps mentors to form teams of students and guide them to develop projects.

Rarely we get chance to develop a product like Projoman. Projoman was unique in its concept and it was a very useful application.

The concept of Projoman was more than interesting for us to start the development.

## The solution

When we started the project we knew that:

- Projoman was a new concept.
- Projoman would be a breeding ground for innovations.
- It would change the way students do projects, as Projoman could help students connect with the mentors across the globe.
- We had to develop the application from just a concept.

## The solution

We conceptualized the product, discussed the concept with few potential mentors and students, decided the features needed in Projoman, designed the architecture of the application, chose the right technologies, designed the User Interface and then started coding for the application.

We followed the iterative development model. Finished coding in 3 months time and deployed the live website. Our challenge was to develop an application that is scalable, fast, useful, feature rich and simple to use and deliver it on time without many defects.

We used WordPress as the CMS for the Projoman website and used ASP.NET for the Projoman application. It was fun integrating these two different technologies for Projoman.

There were a number of interested parties waiting to see Projoman. They were extremely happy with the result.

## The Result

You can see the result at <http://www.projoman.com>.

- Flexible and Scalable platform
- Almost a Zero Bugs Delivery
- Live CMS website with the product in 3 months time
- Easy to maintain

## The Future

Projoman is intriguing for a new website visitor, is useful for a student and satisfying for a mentor. We are currently developing more useful features in Projoman to help the students and mentors improve the productivity.
